Anne Ross Library Home Page

The screenshot displays the Anne Ross Library Home Page. At the top, a large banner image shows a coastal landscape with mountains and the ocean, with the text "Anne Ross Library" overlaid. Below the banner is a navigation bar with links: ABOUT, LIBRARY, CONTACT, ARCHIVE, and UMHS HOME.

The main content area is divided into three columns:

- RESOURCES**: A list of links including Library Catalogue, UMHS LMS, LMS Library Services, Discovery Search, Academic Search, Medline Complete, Clinical Academic eBooks, PubMed +UMHS Link, Google Scholar +UMHS Link, Access Medicine, JAMAevidence, and UpToDate.
- Welcome**: A central section featuring the EBSCO Discovery Search interface. It includes a search bar, a "Search" button, and options to limit results by Keyword, Title, or Author. Below this, there are checkboxes for "Full Text", "Peer Reviewed", and "Catalog Only". A paragraph describes the library's mission to support the curriculum, research, and information needs of students and faculty through various resources.
- NEWS & EVENTS**: A section with three news items:
 - March 2021**: Continue to enjoy full access to the excellent AMBOSS Library & QBank! For further instructions see LMS Library Services.
 - February 2021**: UMHS now enjoys full access to the excellent AMBOSS Library & QBank! For further instructions see LMS Library Services.
 - November 2021**: Discover the EBSCO eBook Mobile App, the quickest and easiest way to read EBSCO eBooks!
 - October 2021**: The go-to clinical point-of-care resource UpToDate is now available to UMHS Faculty &...

WHO Embarks on the Creation of a Global Health Facilities Database

The World Health Organization is responding to a crucial global health care need. The need to simply know *'Where are your health facilities?'*

The WHO announced the creation of a new **Global Health Facilities Database (GHFD)** that will allow all populations to locate and access information about health care services and facilities on a global scale. This timely and essential repository will

'standardize the master lists of local and regional health facilities into an open database. Doing so will strengthen country's technical capacity at all levels, improve data interoperability across information systems, support the provision of universal health coverage...' etc.

 A Global Health Facility Database as a Global G...

...facilitating communication between the Library and the Faculty, students, staff and community partners of the University of Medicine & Health Sciences (UMHS).

UpToDate Search

The screenshot displays the UpToDate web interface. At the top, there is a search bar with the text 'Search UpToDate' and a magnifying glass icon. To the right of the search bar, the text 'University of Medicine and Health Sciences' is visible with a dropdown arrow. Below the search bar, a navigation bar contains links for 'Contents', 'Calculators', 'Drug Interactions', and 'UpToDate Pathways'. On the right side of this bar are buttons for 'Register' and 'Log In'. A left sidebar titled 'Topic Outline' lists various topics under 'GENERAL MANAGEMENT ISSUES' and 'COVID-19-SPECIFIC THERAPY'. The main content area is titled 'COVID-19: Management in hospitalized adults'. It includes author information (Arthur Y Kim, MD, FIDSA; Rajesh T Gandhi, MD, FIDSA), section editor (Martin S Hirsch, MD), and deputy editor (Allyson Bloom, MD). A 'Contributor Disclosures' link is provided. A note states: 'All topics are updated as new evidence becomes available and our peer review process is complete. Literature review current through: Dec 2021. | This topic last updated: Jan 24, 2022.' The 'INTRODUCTION' section discusses the importance of coronaviruses and the impact of COVID-19. It mentions that the disease is designated COVID-19, which stands for coronavirus disease 2019 [1]. The virus that causes COVID-19 is designated severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). The text continues: 'This topic will discuss the management of COVID-19 in hospitalized adults. Our approach to hospital management evolves rapidly as clinical data emerge. Clinicians should consult their own local protocols for management, which may differ from our approach. Interim guidance has been issued by the World Health Organization and, in the United States, by the Centers for Disease Control and Prevention [2,3] and the National Institutes of Health COVID-19 Treatment Guidelines Panel [4]. Links to these and other related society guidelines are found elsewhere. (See 'Society guideline links' below.)' The management of patients with COVID-19 in the home and outpatient setting is discussed in detail elsewhere. (See 'COVID-19: Outpatient evaluation and management of acute illness in adults'.) (Related Pathway(s): COVID-19: Initial telephone triage of adult outpatients and COVID-19: Anticoagulation in adults with COVID-19.) Respiratory and critical care of patients with COVID-19 are also discussed separately. (See 'COVID-19: Respiratory care of the nonintubated hypoxemic adult (supplemental oxygen, noninvasive ventilation, and intubation)' and 'COVID-19: Management of the intubated adult'.) The epidemiology, clinical features, diagnosis, and prevention of COVID-19 are discussed in detail elsewhere. (See 'COVID-19: Epidemiology, virology, and prevention' and 'COVID-19: Clinical features' and 'COVID-19: Diagnosis' and 'COVID-19: Infection prevention for persons with SARS-CoV-2 infection' and 'COVID-19: Vaccines'.) The 'EVALUATION' section is partially visible at the bottom.

Abstract

Objective: This study aimed to explore the early functional results of total hip arthroplasty (THA) using the supercapsular percutaneously assisted total hip (SuperPATH) microposterior approach.

Methods: In this retrospective study, 58 patients treated with THA from October 2015 to April 2016 in our hospital were enrolled. A total of 28 patients (11 men and 17 women; mean age: 74.95±7.06 years) were operated on using the SuperPATH approach (group 1), and the remaining 30 patients (12 men and 18 women; mean age: 75.63±7.89 years) were operated on using the conventional posterior approach (group 2). To summarize the early functional results of the SuperPATH approach, we retrospectively analyzed the following demographics, perioperative factors, and measures of joint function: age, sex, preoperative diagnosis, preoperative visual analog scale (VAS) for pain, body mass
